Product: MDTech EDRGuard Cyber Security Program

SKU: 99-09070-001

Retail Price: $59.99/month

Overview: Protecting your business and customers from the threat of ever more sophisticated ransomware, malware, phishing, and other cyber-attacks is more important than ever. We continue to see 100%+ year over year growth in these threats while less than 15% of businesses are prepared to defend themselves.

The MDTech EDRGuard solution addresses the most common sources of cyber incidents for small to mid-sized businesses in an all-software solution. Because no hardware is required, implementing this solution is easier than ever and can often be accomplished in 30-minutes or less!

The biggest risk to your business for a cyber incident is the computers that your users utilize to access the Internet and email. The included MDTech Managed Endpoint EDR client is installed on each of your computers and provides unprecedented AI-powered threat detection to prevent and alert us about attacks before they can even start.

The program also includes periodic scans of your Internet connection looking for known vulnerabilities and configuration errors. These ASV reports can be shared with your credit card processor for merchants that have that requirement.

Finally, in the unlikely event that a cyber incident was to occur, the included Advantage $100K breach indemnity program provides no sub-limit coverage for the cyber event. Unlike other programs that exclude or limit ransomware coverage, our solution specifically includes it.

Stop guessing about your endpoint security posture and enjoy the peace of mind and protection provided by EDRGuard today before your business becomes another cyber security statistic.

Program Features:
- Advantage $100K Breach Indemnity Program
    - Covers numerous cyber incident expenses with no sublimits.
    - Card brand assessments, fines, fees, penalties
    - Regulatory assessments, fines, fees, penalties including HIPAA
